I have created the DB connection in MSSQL, and created the user and password for it in MYSQL. I have changed the database type to MyISAM as I understand that is necessary for a MYSQL to MSSQL connection. I am able to access the DB, but unable to update and insert into it. When attempting to update, I am receiving the error message: ****This operation conflicted with the TRIGGER of your reference table**** I'm assuming this means that I cannot insert into the table because there is a trigger defined. I can't figure out how to enable the trigger. My code is shown below, any help would be appreciated. a1d647c40b
