2020.Q: how to overprint one of the pixels in Image Processing? i am new in the image processing, and i want to some simple examples of image processing in C#. i read this example of overprinting one pixel :

```
public Bitmap  
Print(Bitmap img) { Bitmap b = new  
Bitmap(img.Width, img.Height); Graphics g =  
Graphics.FromImage(b); g.DrawImage(img,  
new Rectangle(0, 0, img.Width, img.Height),  
new Rectangle(10, 10, 100, 100),
```

---

GraphicsUnit.Pixel); return b; } I dont know how to overprint exactly one pixel from the following image : A: You have already used the GraphicsUnit.Pixel as the second argument. It is the system graphic unit, normally used in conjunction with units on the pixels. For example the BackgroundColor of a Graphics object is in GraphicsUnit.Pixel, but the foreground is in GraphicsUnit.Text. The example is incorrect: it sets both foreground and background at the same colour, and returns both. It should instead be like this:

```
public Bitmap Print(Bitmap img) { Bitmap b =
    new Bitmap(img.Width, img.Height);
    Graphics g = Graphics.FromImage(b); Color
    c1 = img.GetPixel(10, 10); Color c2 =
    img.GetPixel(10, 10); g.Clear(c2);
    g.DrawImage(img, new Rectangle(0, 0,
    img.Width, img.Height), new Rectangle(10,
    10, 100, 100), GraphicsUnit.Pixel); return b; }
```
