

**AutoShut Crack + With Keygen Download [32/64bit]**

eXIST - a calendar for tasks and events eXIST is a Calendar / to-do list and reminders organizer software for Windows. It has comprehensive support for various appointments, including recurring ones, and actions with deadlines. eXIST makes it easy for you to remember new tasks or important events that need to be executed in the future. The application allows you to work in the Calendar with pre-configured reminders, repeating tasks or one-shot actions, and create, edit or delete events and appointments. The program offers a reasonable Calendar option, where the user can select a day, month or year. The events can be connected to one another and to the times of their executions, so you can easily synchronize them in different applications and systems. Using eXIST is very easy - it just works - all you have to do is select your preferred calendar and then click Add Event or Click To Date for recurring tasks. You can create new reminders, start new one-shot actions, modify an existing event and add items to the task list. There's a good variety of built-in tasks: stop, print, record, reminder with a specified time and date, e-mail, download an attachment, view an image, etc. You can make new events, attach files, send e-mail messages, or open a web page, using the integrated Internet Explorer. The program supports the most common Internet protocols and address formats, such as HTTP, FTP, WAIS, Gopher, MMS, MAPI, POP, IMAP, SMTP and even integrates into Netscape. You can even delete items from the task list, or display a custom form on which to enter the action description, the name, the due date, or the status. You can even associate the actions that you create with one of the calendar dates. eXIST also includes a built-in editor, which makes it easy to modify the description or the time of an action, edit existing appointments, or duplicate, move or rename events. You can work with a calendar in reverse (select all the events and choose Forward), and add duplicate events or attach a file to any event, to be executed at a later date. The program is easy to use and its design is very intuitive. The detailed help system is available at all times, so there's a place for every question you may have. With eXIST, you can easily work with tasks
