If you already have some ITRMacro command files that you want to reuse, just add them into a folder and you can use them for drag and drop files in Desktop Drop Boxes. If you want to create new macros that you can share with others, you can use the command interface to do it. You can create new macros using the command line by typing mkdir in the included VS Code package. A command line that is especially useful is mkdir and because it can be shared between users, you can reuse the same macro in your code and paste it in a different folder. On Windows, run the command line from the PowerShell command line to create your macro. On macOS, run the command line from the Terminal.app to create your macro. mkdir: Create a new folder to store your macro. >>mkdir:Creates a new folder to store your macro.
