What's New In The Analysis Reconstruction Sound Engine?

The Analysis & Reconstruction Sound Engine lets you analyze a sound file into a spectrogram. You will also be able to synthesize this spectrogram, or any other user-created image, back into a sound. You can

process a.WAV sound file with this program in order to obtain a.BMP image file.

Once you've edited this image, you can process it in order to obtain a.WAV sound that sounds more or less like the original sound, depending on how you edited it and depending on the settings you chose.

The Analysis &

Reconstruction Sound
Engine Features:
Synthesize a
Spectrogram: You can
choose a Spectrogram
image that you've
already created or you
can create a new
image using any
Windows picture
editing software. You
can also create a
Spectrogram image for
any sound that you
import, from a WAV

sound file, or from a media player like Windows Media Player or QuickTime. You will be able to edit the Spectrogram you've created, using a digital paint program like Photoshop, or an image editor that supports layers like CorelDraw. You can click any part of your spectrogram image, and it will transfer this

part of the spectrogram into the sound file. You can then alter this part of the sound file, using the controls that are on the program. After you've done this, you can click the Synthesize button, and your Spectrogram will become a part of a WAV sound file.

Import WAV Sound Files:

You can import

any. WAV sound file. You can import a sound file of any length that you'd like. You will be able to analyze this sound file, into a Spectrogram, and you will be able to synthesize the image back out as a. WAV sound file. The. WAV sound file that you obtain using this program will be of the same length as the

sound file that you imported. The sound file that you process using this program will be of the same length as the sound file that you processed. The Synthesize Button: You can choose to analyze a WAV sound file, or you can analyze any sound that you import. You can choose to process a sound that you import

or a sound that you analyze. You can synthesize a Spectrogram or any other image you've edited. The options that you choose, will determine which part of the sound file will be used in the synthesis. The “automatically generate frequency” option will cause a waveform to be

created that covers the length of the sound file you are analyzing. The waveform will be in the frequency range that you chose. You can choose the frequency range that you want for the waveform that you generate automatically.

System Requirements For The Analysis Reconstruction Sound Engine:

Minimum: OS:

Windows 7, Windows

8 Processor: Intel Core

i5-3570, AMD

Phenom II X4 860

Memory: 8 GB RAM

Graphics: DirectX 11

DirectX: Version 9.0c

Hard Drive: 200 MB

available space

Additional Notes: A

smooth 60 FPS

framerate is
recommended.
Recommended:
Processor: Intel Core
i5-3570, AMD
Phenom II X4 880
Memory: 16 GB RAM
