Subscribe to updates for this application Enter your email address to subscribe to updates for this software. Your email address will only be used for this purpose.Q: Nested promises in Mocha I've read, that I should avoid

---

nesting promises and creating more than one await per test, but I have a scenario where I need to solve an asynchronous problem. A bug occurs when I save data in another table, and I want to check that the save is not successful. But since my tests are coupled to my DB, I want to check it on another DB. What I did is to create a DB in my test that has the same structure as the other DB,

Control Macros KEYMACRO is a macro recorder for all your shortcuts and macros on the Mac. It records everything you do on the keyboard, not just the keys you press, but the order, the timing and anything else you do. And, when you stop the recording, you can play it back. You can make a lot of great keyboard shortcuts and macros in just a few seconds. Simple to use All you need to get started is to open KEYMACRO and press a key combination to record the action. The key combinations are organized into folders. There's no limit to how many folders you can create. There is a limit to the number of macros you can have. You can add as many shortcuts as you like, but it's a good idea to try to keep your total number down to the maximum. You'll be able to re-record macros any time you want, so you can choose any key combination you want over and over again to create new and improved shortcuts. Playback as you record When you're done recording, you can review all your recordings at any time. Simply press the Play button to start and stop playback as you want. KEYMACRO lets you press multiple keys in sequence to do lots of things all in one step. You can also use multiple macros on one keyboard shortcut. You can create new key combinations in any of the following categories: Recurring tasks ...some it to a text file, or

even to excel. I am looking for something that is clean and presentable, and the software also has to be able to send to email. But the one feature that I am looking for is a way to change the font to a different font. This is done by using numbers or letters that I put in a certain spot or in a place of the text. I am working on a web project that I need to be able to change the fonts, and I am asking about what I am going to need to get the job done. Thanks! \*Note - I am in the United States. ...some it to a text file, or even to excel.
