It looks as though the Independents are a step closer to claiming their share of the votes in the upcoming leadership election. We will only have time to cover the latest news until the official results come in. Pauline Hanson is off the back of an ABC 7.30/A Current Affair Four Corners piece about the shrinking military. Obviously, this is only half the story as the ABC failed to interview her regarding the economy (it's all about the economy for the party of wealth redistribution). However, there is a growing feeling that Independents are going to prove an important factor in this election with many disillusioned Greens and a handful of disaffected Labor and Liberal voters, some of whom are already on the way to the Independents. At the moment it looks as though the Independents are hoping for a roting of the electoral system in their favour but they will not be able to secure the required seats unless they are to the right of the major parties. Which is why we have seen the splitting of the One Nation vote, with Hanson's supporters putting aside their differences for the moment in an attempt to keep Pauline Hanson as leader. The Daily Telegraph reports that One Nation is now more likely to support Labor in the House of Representatives. The only thing keeping the coalition together is the out of touch Tony Abbott who is now in danger of losing his job unless the Greens step up to the mark. The Greens are now considered by many to be the most viable alternative and a more centrist approach will help broaden their support. Even Bill Shorten, who has always taken a hard line on immigration and offshore detention, has shown some improvement on the issue and will now support a review of Australia's refugee policy. Obviously, this is not going to be a long term change and the focus will
