2. In the Toolbox, click the Brush tool. 3. Click the Brush tool to the right of the Brush thumbnail. 4. From the Tools panel, select the Pixel Brush option, as shown in the figure below. 5. The Brush Options dialog box opens. 6. You can view the brush options in the Brush Controls or Details panel. The Brush Controls panel contains the settings for the most common Brush and Textural options. The Details panel is designed for working with the Brush tool to change the look of your Brushes. 7. For now, we'll go to the Brushes panel in the Options bar to modify the brush controls. Here, you'll find many options, including a selection of sizes, shapes, and opacity settings that you can use to control how your brush affects the image. 8. Make sure the Brush Controls and Details panel are open. When the Brush Controls panel is closed, it will be displayed in the menu along with the Brush tool. 9. To change the size of the brush, click and drag the size slider. Notice that the brush has a dotted line for the size, with each click changing the dotted line's size. Notice the pixel distance in the lower-right corner. 10. To change the brush shape, click and drag on the Brush Shapes option to select one of the available shapes. 11. Next, select the Brush Opacity setting. Notice that there are four possible settings. The lower setting for Opacity will make the brush appear more transparent, while the higher setting for Opacity will make the brush appear more opaque. The middle setting gives a moderate effect. I selected the lowest setting for this brush. 12. As you can see, the Brush Controls panel is still open. Click the Close button to close it, and close the Brush toolbar.

The year is 1987. The world is on the brink of being destroyed. The big popular entertainment industry with its four-letter acronyms is trying to save the world. And the world's premier cyber-magazine, SciFi Classics, is doing what it does best. "We're here to tell you — and you won't believe it — Star Trek finally has arrived." It was a unique time in the history of technology, and it was a big time to be taking on that challenge. There was a lot of information technology coming out of California, and many of the companies dealing with technology at that time were Californian. It didn't hurt that millions of people wanted to buy computers in homes. They wanted convenience and portability. Computer prices were coming down with each new model release. It was the era of the IBM PC XT, the 800K+ Kodak Color Printer, and the Atari VCS. Many of the computers of the day were going to be released in an entirely new and innovative form. By the year 1987, it was no longer a question of if any product would be released with the Personal Computer on it. It was already a fact. The Commodore Amiga had been the first true 128-bit computer. It heralded a new age of computer user interface. Its flagship game, Lemmings, was something of a revelation. But it was not the first supercomputer to use graphics. That would be the Super Mario Bros. Nintendo, which had been making other games for up until this point, reached down into its history and dug up a collection of characters from its iconic 8-bit systems. And they plucked one of them from its arsenal to make the Donkey Kong video game. The return of that iconic title would be a harbinger to a host of other players. For many, the effect of the video game revolution would be a complete change of pace. Their favorite pastime was gone. Even family time was bound to become more serious. Video games, as one group of experts noted: "...gave kids a window into a fantastic world of objects, characters, and colors which they could not conceive of being able to create themselves..." All of this changed the world forever. The video game had brought us into a revolution. All of those things that we used to do — and probably don't want to do — could be made fun of
