Mahindra & Mahindra, the country's second largest automobile manufacturer, is collaborating with Elbit Systems Ltd., the Israel-based global leader in robotics and automation solutions, for the development of a new technology that will make it possible for Mahindra vehicles to be automatically piloted by a driver within a few years. The agreement was signed at the ongoing Israel Automated Vehicles (IAV 2017) conference in Tel Aviv this week. The technology, which is more commonly referred to as "L-Vision" or "L-Visor", has already been demonstrated to the public and will be adopted as a pilot project in the development of Mahindra vehicles. According to Elbit, the final vehicle will cost approximately \$25,000 while the system itself will be priced at less than \$50,000. Automation, it is believed, will make it possible to make vehicles safer, more flexible and, in turn, increase the efficiency of their operations. L-Vision, which works by analyzing driving data captured using cameras installed on the vehicle's exterior, relies on a combination of artificial intelligence and deep learning to deliver almost flawless driving, even on complex roads and in adverse weather. The technology is also capable of identifying and correcting problems before they happen and according to Mahindra, it "will be a game changer for the automotive industry." AI, it is believed, will make it possible to make vehicles safer, more flexible and, in turn, increase the efficiency of their operations. According to industry experts, in recent years vehicles have become more complicated to operate, especially outside cities and roads where they lack GPS navigation and communication signals. This has increased the risk of accidents and contributed to the number of fatalities on Indian roads as well as traffic congestion. It is being widely reported in the mainstream media, for example, that a major highway was closed for two months last year due to a lack of public transport, forcing people to walk more than 20km in order to get to their destinations. In
