A: You should never use a key, key ID, or key serial number as a filename or otherwise. You cannot know with certainty that a given key file is the same one you will need when you open it. There might be any number of other files by the same name under different paths or under different names. The only safe way to get a file is to execute an install step to generate an identification string that is stored in a key file. You may generate such a string by executing an install step whenever you have a new file. [Vesical emptying technique in urinary incontinence]. The voiding dysfunction in cases of bladder outlet obstruction is frequently caused by a stenosis of the membranous urethra and the bulbar urethra. The best therapeutic solution for these cases is an internal urethrotomy. However, there are lots of contra-indications for this surgery which are mainly micturition-related diseases. For these cases, alternative techniques to the internal urethrotomy are either a transurethral incision of the bulbar urethra or a transurethral vesicourethral anastomosis. A vesicourethral anastomosis is indicated in cases of bladder dysfunction with obstruction, and should be performed at a minimum of 3 cm below the bulbar urethra. When deciding on which technique, care should be taken in choosing the appropriate distance for the vesicourethral anastomosis considering that the risk of bladder neck stenosis is higher when this distance is small.It's been a while since our last Big Data and IoT check
