Castle- Season 4-720p. 1 2 3 4. Biochemical changes of *Neisseria*
gonorrhoeae at 37 degrees C and in human serum by a calcium-
binding lectin. The effect of a calcium-binding lectin (CBL) on the
interaction of *Neisseria gonorrhoeae* with serum, especially on the
ability of the bacteria to grow at 37 degrees C, was studied. The
results of these studies demonstrated that the bacteria were much
more susceptible to CBL than to human serum. The addition of the
lectin (0.09-0.1%) to the bacterial cultures, initiated a proliferation of
bacteria which was clearly distinguishable from that of the control
cultures and which resulted in greater numbers of cells than that of
the bacterial cultures in the presence of serum alone. The ability of
the bacteria to agglutinate chicken erythrocytes appeared to be
unaffected by the lectin. G3/*Bacillus thuringiensis* Bt2-6 specific
binding to mice gut epithelium is mediated through the C3H/HeJ
segment-specific epithelium protein (C3/HeP) of the murine MHC.
The bacterial haemorrhagic enterotoxin from *Bacillus thuringiensis*
