.Reducing myocardial ischemia in patients with acute myocardial infarction. The risk of recurrent coronary ischemia is very high among patients with acute myocardial infarction (AMI). To assess the utility of adjunct stress testing in the management of patients with AMI, a randomized, prospective study was conducted comparing the combined use of isosorbide dinitrate and exercise stress testing (N = 91) with traditional assessment of risk factors for future coronary events (N = 86). Patients with AMI on reperfusion therapy completed stress testing at 9 +/- 4 days of hospitalization. Adjunct testing was associated with a 60% relative risk reduction in recurrent ischemic events and a 76% reduction in coronary events. These findings were similar in diabetic and nondiabetic patients. The increased risk of recurrent ischemia among diabetics was more prevalent in the presence of multivessel coronary artery disease than in the absence of coronary artery disease. The frequent occurrence of recurrent ischemia in patients with multivessel coronary artery disease suggests that in such patients the timing of coronary revascularization is crucial.A methodology for the characterization and modeling of electromagnetic fields in anelastic seismic waveguides. A methodology is developed to perform in-situ measurement and modeling of electro-magnetic (EM) waves in a waveguide (WG). Using a combined multiple-source/multiple-receiver experimental system, the EM field in a WG is measured and the magnetic field distribution in the WG is calculated. Simultaneously, the mechanical deformation associated with the EM field is recorded in the WG using a two-component displacement transducer. Using the mechanical response, the induced EM field is modeled in the WG using an elastic waveguide model with a homogeneous parameter distribution. The capabilities and limitations of the experimental methodology are demonstrated for a representative WG model: a section of a buried transmission line.2219 Fennell 2219 Fennell, provisional designation, is a Craterian asteroid from the inner regions of the asteroid belt, approximately 5 kilometers in diameter. It was discovered on 23 September 1949, by Austrian astronomer Johann Palisa at Heidelberg Observatory in southern Germany. The asteroid was named after the discoverer's daughter, Judit Fennell. Orbit and classification Fennell is a member of the Crater family (), a large group of asteroids that reside between the orbits of 6d1f23a050
